PROFESSIONAL SUMMARY

CS undergrad (AI & ML, Jerusalem College of Engineering, Chennai) who ships — **5 deployed projects** across Android, full-stack web, game development, and AI integration, with **50+ commits on GitHub**, active LeetCode practice (**49 problems solved** — arrays, trees, dynamic programming), and a **1st place competitive coding win**. Proficient in Python, C#, OOP principles, REST APIs, SQL-backed cloud apps, and Agile Git-based collaborative workflows. Looking to contribute production-ready code to an engineering team as an SDE Intern.

TECHNICAL SKILLS

Languages & Core: Python, C#, C++, Java, Kotlin — OOP principles (C#, Python, Kotlin) — primary in Python and C#

Web & Backend: HTML5, CSS3, JavaScript, React, Vite, REST APIs, Node.js, SQL (basic), Git / GitHub

Cloud & Infra: Supabase, Firebase, cloud deployment, JWT authentication, real-time sync, WebSockets, Redis

AI & ML: Agentic AI systems, ML concepts, Gemini API integration, Ollama (local LLMs)

Game Dev: Unity 6, C#, 2D/3D physics, Minimax algorithm, component-based architecture, URP

Mobile: Android (Kotlin + Jetpack Compose), Media3 / ExoPlayer, Room, WorkManager

EDUCATION

Bachelor of Engineering in Computer Science (AI & ML) *Expected 2027*

Jerusalem College of Engineering, Chennai | **CGPA: 8.0 / 10**

Relevant coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks

PROJECTS

NeuroCart — Real-Time Adaptive Shopping Assistant | *React · Vite · Supabase · Cloud Run | Team BuildApr 2025*

- Shipped a zero-login personalization engine achieving **real-time product reordering in under 15 seconds** by building a behavioral tracking hook (click, hover, cart-add events) that computes an engagement score and queries Supabase for top-category recommendations on a live interval — deployed to Google Cloud Run.
- Reduced onboarding friction to **zero form fields** by engineering an anonymous session management system using localStorage + Supabase sessions table, enabling instant personalization with no user registration — demoed at AMD Slingshot Campus Days Hackathon, Chennai.
- Collaborated in a **team of 3 across 3 Agile sprints** using Git branch-per-feature workflow and peer code reviews via GitHub pull requests — debugged and resolved 8 race-condition edge cases in the behavioral scoring pipeline.

Kitchen Chaos — Cooking Simulation Game | *Unity · C# · Git2024*

- Shipped a fully playable multi-level game with **zero critical bugs at launch** by engineering a modular, OOP-structured interaction system in C# — reducing iteration time by ~40% across 3 Agile sprints.
- Maintained a clean version history across **50+ commits on GitHub** by enforcing atomic commits and a branch-per-feature Git workflow, enabling fast rollback and peer code-review readiness.

Tic Tac Toe — AI Opponent | *Unity · C# · Algorithms2024*

- Built an unbeatable AI opponent achieving **100% win-or-draw rate** on hard difficulty by implementing the Minimax algorithm with game-tree pruning for optimal state evaluation across all 9! board permutations.

- Reduced UI response latency to **under 50ms** by decoupling game state management from rendering logic using OOP design patterns, supporting both local co-op and single-player modes in a unified codebase.

2D Open World Game | *Unity · C# · System Design*2024

- Delivered smooth **60 FPS exploration** across a multi-zone open world by designing a component-based OOP architecture in Unity — cutting scene load time by 30%.
- Reduced world-building iteration time by **2×** by building reusable, scriptable tile and entity prefabs, enabling rapid level design without touching core game logic.

Personal Diary — Cloud Web App | *Full Stack · REST API · SQL · Cloud*2024

- Shipped a production-deployed app with **sub-200ms read/write latency** by integrating a cloud-hosted SQL database via a REST API backend with JWT-based authentication and real-time data sync.
- Achieved **zero unauthorized access incidents** by implementing end-to-end auth flow and enforcing row-level security at the database layer; debugged and resolved 5 token-expiry edge cases during testing.

HONORS & ACHIEVEMENTS

1st Place — Cipher Quest Coding Contest — Jerusalem College of Engineering (Oct 2024)

Ranked top among 60+ participants in algorithmic problem solving under time-pressure conditions

Built NeuroCart — AMD Slingshot Campus Days Hackathon — Chennai (Apr 2025)

Designed and shipped a functional AI-powered adaptive shopping assistant within a 24-hour sprint; deployed to Google Cloud Run

Developed security-themed solution — Cyber Connect Hackathon — SIMATS Engineering (Dec 2025)

Competed under live judging conditions; built and presented a working prototype

CERTIFICATIONS & TRAINING

STTP — Agentic Verse (Agentic AI) — SRMIST Sept 2025

Unity 2D RPG: Complete Combat System — Udemy Dec 2025

LEADERSHIP

- Coordinated logistics for club-wide events as Logistics Committee Member, Rotaract Club (Jan 2025) — recognized as ‘Pillar of Logistics’ for zero-incident execution across 3 events.
- Selected for Rotary Youth Leadership Awards (RYLA) — a competitive programme focused on leadership under real-world constraints.
